

## Primary Rate Interface (PRI)

PRI is a scalable, cost-effective, digital voice solution designed to help your business stay connected and make the most of your existing communication systems.

# PRI Voice

### Ultra Reliable

PRI is a digital circuit which uses our state-of-the-art fiber optic network and redundant switching infrastructure to deliver reliable, digital voice services.

### Unmatched Clarity

Voice communications are much clearer with a PRI system's digital end-to-end connection, helping eliminate unwanted noise typically experienced in analog solutions.

### Scalability

With a standard of 23 B channels for voice and a D channel for routing and controlling the information, you can easily scale your capacity to meet your communications needs. We provide services in single PRI increments and can provision additional capacity quickly and efficiently.

## About Glo Fiber Enterprise

Our parent company, Shentel, has been in this business for roughly 120 years. Our advanced fiber network is built to ensure you keep pace with the ever-changing demands of our connected world.

## Frequently Asked Questions

### Why should I use a PRI (Primary Rate Interface)?

The PRI is the current standard for delivering voice service to a traditional PBX. We can help you make the most of your communications system with PRI services delivered over our state-of-the-art fiber optic network.

### How does a PRI work?

PRI service delivers digital voice to multiple end-users over a single interface.

### How many connections can a PRI line handle?

Each PRI has the capability for 23 simultaneous voice connections as well as a data channel for call routing and signaling.

### Does a PRI Voice system make sense for my business?

With its expanded features, standard interface and reliability, the PRI solution allows you to provide professional service at very little incremental cost.
